Product Designer & Design Engineer

I design and build products from idea to production. My background is in product design, but over the last year I've moved into design engineering, using AI-assisted development to ship production-ready applications. I work across product strategy, UX, visual craft, design systems, and implementation.

WORK EXPERIENCE

Kofa Design

Owner · Product Designer &
Design Engineer

2022 - Present

Working with startups and technical teams to shape products from idea to launch. Alongside client work, building Santolina.

Santolina: Designed and built a plant care platform from concept to production, defining the product strategy, UX, visual design, design system, frontend implementation, and data architecture.

Shuttle: Supported the platform's growth from early traction to 20,000+ developers and 120,000+ deployments as a sole product designer across dev console, web and growth surfaces. Led a complete console audit and redesign, introducing consistent UI patterns, design system and information architecture.

Neptune: Designed brand and web experience for an AI infrastructure platform. Built & shipped a scripted agent-chat animation with AI, now live on the platform's website.

Dealio: Designed an online marketplace platform from concept to launch in under one year. Simplified seller ad creation, improved buyer discovery, and introduced structured buyer-seller communication. Platform launched with 78% CSAT.

MixLodge: Defined the MVP structure for a marketplace connecting musicians and producers. Designed end-to-end flows across discovery, booking, and collaboration, delivering implementation-ready product architecture in 3 months.

OptimoRoute

Lead product designer

2020 - 2022

Led end-to-end product design for a route optimization platform used by logistics teams worldwide, managing a two-person design team. Helped shift the product from engineering-first to design-driven, improved usability, evolved the design system, and refreshed the UI.

Redesign increased returning session duration by 34%, improved discoverability across Analytics, Dispatch, and Planning, and reduced time-to-first-use at the 75th and 90th percentiles, meaning faster onboarding for users who struggled with navigation.

Five Agency (now Endava)

Product designer

2017 - 2020

Owned design across a range of client projects spanning mobile apps, web products, and digital brand experiences. Led product design workstreams, collaborated closely with stakeholders and engineers, and mentored junior designers.

Produkcija Pokret

Digital designer, Illustrator

2016 - 2017

Created illustration systems and visual assets for animated explainer videos, along with landing pages and marketing campaigns. Built cohesive visual systems that strengthened brand communication across digital channels.

EDUCATION

Faculty of Graphic Arts, UNIZG

Masters, Multimedia

2017

Infinum Academy

Digital Product Design Course

2016

University of Applied Sciences

Bachelors, IT Design

2014

SKILLS

Product design, Interaction design, O-1 product shaping, Systems thinking, User flows & IA, Design systems, Frontend implementation.
